

# New Directions in Progressive Relaxation Training: A Guidebook for Helping Professionals

Psychotherapy continues to progress at a remarkable rate as researchers become more creative in the development and application of a wide variety of empirically tested techniques. Older techniques have been refined and newer ones have emerged. Both old and new techniques are being quantified, assessed, and compared in group design research, and, for the first time since modern therapy's beginnings in the writings of Sigmund Freud, remarkable strides have been made in asking and answering vital questions about the effectiveness of various treatment strategies. One such strategy, Progressive Relaxation Training, grew out of a set of methods originating in the 1930s in the writings of Edmund Jacobson. The primary purpose of this guide is to set forth in detail the therapist behaviors and skills necessary for the effective application of progressive relaxation training. The guide was designed to provide therapists in many disciplines—including psychology, psychiatry, social work, pastoral counseling, nursing, and rehabilitation services, for example—with the tools they need to train their clients in relaxation. The guide was also designed to be used in research on stress and stress management, psychotherapy outcome, and related topics. This purpose is particularly important because there are few manuals available which describe in detail the actual procedures used in relaxation training.

My curiosity got the best of me the other day and I gave in by watching one of those "End of the World" conspiracies videos. This time around the date is set for July 29, 2016. So in three days the biblical prophecies will come true and we will be swallowed up by hell fire while the others who are "saved" will rejoice in the heavens.
