

Learning Disabilities

This work, while written by an academician, is an uncomplicated resource of information that will serve as a quick study for parents who have been introduced to the concept of special education for the first time. While students and professionals may find this information controversial, they too may gain some insight into environmental influences upon learning that may serve them well during the assessment process. Part I is an introduction to the environmental influences since World War II that are believed to be contributing to the incidence of learning disabilities that is increasing at the rate of 20% every 10 years. Some of the social practices having the most negative influence upon child development are identified. Part II introduces the reader to the process of determining eligibility for special education and Federal and state legislation are explored in terms of the parents rights in the process. The responsibility of the school district and some explanation of the discrepancy between what the law says and what the schools are doing is examined. Further, it explains why the schools are not always able to abide by the spirit and letter of the law. Part III is an exploration of processing disorders, as required for a designation of learning disability. Behaviors exhibited in the classroom and a rationale for the behavior along with modifications and accommodations for the general education classroom are offered. These interventions are applied to the elementary, middle school and high school environments as an aid in developing the Individualized Education Plan (IEP). Finally, some liberty is taken to be candid about child-rearing practices in modern America; the attitudes of teachers and schools toward children needing special education; and to share with parents the many things about children, education and the law about which it is not in the schools best interest

for them to know. Overall, this work is a road map of how-to activities which will be of assistance from the beginning to the end of the special education process. The information contained herein is intended to assist parents in making a decision about whether to place their child in special education and to provide some ways to assist the learning process at home and in the general education classroom. Also, it may be of some help to parents who have already made the decision and have placed, or refused to place, their child in special education. The objective of this work is to assist parents and professionals in assuring that each child receives a free, appropriate, public education by building an education program around identified learning strengths and weaknesses while seeking an answer to the question is special education appropriate even if the child is eligible?

NEWAGEOFTRUTH There's been too many lies and not enough truth stay updated via rss MY NEW PLAYLIST Why are some looking forward to the end of days? Posted: July 26, 2016 in Cheating, Education, Evil, Politics, Religion, Social Issues Tags: Armageddon, bible, Christianity, Conspiracy theory, Prophecy, Y2K 0 end of days Some temptations are just too good to pass up. My curiosity got the best of me the other day and I gave in by watching one of those "End of the World" conspiracies videos. This time around the date is set for July 29, 2016. So in three days the biblical prophecies will come true and we will be swallowed up by hell fire while the others who are "saved" will rejoice in the heavens.
