

International Entry Mode Choices of Software Firms: An Analysis of Product-Specific Determinants (Informationstechnologie und Ökonomie)

When entering foreign markets, software firms need to make a fundamental choice regarding the distribution arrangements for software products and related services. This choice may involve contracting with local partners or entering foreign markets through company-owned channels. This book focuses on analyzing such boundary choices. Taking a resource-based and knowledge-based perspective, a research model is developed that outlines software firms international entry mode choices in the light of software product and service characteristics. The research model is tested based on survey data from medium-sized German software firms that operate internationally. Thus, the book provides theoretically and empirically grounded insights into the determinants of software firms entry mode choices.

My curiosity got the best of me the other day and I gave in by watching one of those "End of the World" conspiracies videos. This time around the date is set for July 29, 2016. So in three days the biblical prophecies will come true and we will be swallowed up by hell fire while the others who are "saved" will rejoice in the heavens.
