

# Neurobiology of Learning and Memory (Advanced Series in Neuroscience)

This volume consists of 82 classic and important contributions to the basic neurobiology of learning and memory. Included are historical articles as well as articles on developmental plasticity, hormones and memory, long-term potentiation, electrophysiology of memory, biochemistry of memory, morphology of memory, invertebrate models, and features of animal and human memory. This is a companion volume to Brain Theory Reprint Volume in which articles on mathematical models of memory are presented.

My curiosity got the best of me the other day and I gave in by watching one of those "End of the World" conspiracies videos. This time around the date is set for July 29, 2016. So in three days the biblical prophecies will come true and we will be swallowed up by hell fire while the others who are "saved" will rejoice in the heavens.
